Arham Malik

Backend & AI Engineer

arham3311@outlook.com | +92 333 333 9803 | Islamabad, Pakistan

Portfolio Website | LinkedIn | Arham331

PROFILE

Backend & AI Engineer with 3+ years of experience specializing in scalable backend systems, AI integrations, and high-performance APIs. Expertise in FastAPI, cloud-native architectures, and performance optimization.

PROFESSIONAL EXPERIENCE

03/2026 – Present
Lahore, Pakistan

Tech Solutions.ae
Junior Python Developer

- Developed optimized ETL pipelines using Python, NumPy, Pandas, and AWS for efficient large-scale data processing.
- Containerized apps with Docker, managed Git deployments, and resolved production issues to boost performance.

11/2025 – 03/2026
Gulberg Greens, Pakistan

Zindigi
Junior Java Developer

- Developed backend services using **Java, Spring Boot** in a core banking system
- Contributed to full SDLC of a **FinTech application**
- Optimized database queries and improved execution performance
- Worked on transaction processing and scalable financial systems

RedCoast Corporation

05/2025 – 11/2025
Islamabad, Pakistan

Software Engineer

- Reduced ETL runtime by **15%** via pipeline optimization and partitioning strategies
- Decreased query latency by **60%** and data scan cost by **30%**
- Automated **7+ data workflows** using Cloud Functions, Pub/Sub, and Scheduler
- Automated **80% of AI workflows**, reducing support load by **30%**

08/2024 – 05/2025
Islamabad, Pakistan

Junior Software Engineer

- Improved data throughput by **60%** through automated backfills
- Built **FastAPI services (p95 ≤150ms)** for real-time AI workflows
- Delivered dashboards used by **50+ users**, reducing analysis time by **50%**

05/2024 – 08/2024
Islamabad, Pakistan

Software Trainee

- Processed **8+ datasets** improving pipeline efficiency by **60%**
- Optimized backend logic, reducing dashboard load time by **20%**
- Conducted **A/B testing**, improving CTR by **0.3%**

06/2023 – 12/2023
Islamabad, Pakistan

PTCL
Intern

- Built task management system (C#, ASP.NET, SQL) for internal teams
- Introduced role-based workflows, improving efficiency by **5%**
- Implemented time tracking and reporting features

EDUCATION

08/2021 – 06/2025
Islamabad, Pakistan

Bachelor of Science in Computer Science
National University of Computing & Emerging Sciences
FAST NUCES

SKILLS

Languages
- Python
- Java
- Kotlin
- Javascript
- C#
- C / C++

Cloud & Devops
- GCP
- AWS
- Docker
- Kubernetes
- CI/CD Pipelines

Backend
- FastAPI
- Spring Ecosystem
- Django/Flask
- API Design & Development

Data Engineering
- ETL Pipelines
- Google BigQuery
- Query Optimization
- Pandas/Polars
- Real-Time Data Processing
- Data Modeling

AI/Machine Learning
- LangChain/LangSmith
- RAG Systems
- Vector Databases
- NLP Pipelines
- STT/TTS
- Prompt Routing

Database
- PostgreSQL
- MySQL
- MongoDB
- Firebase
- SQLite

PROJECTS

Apex Analytics
— Data Analytics Platform
React | Django | GCP | Docker | BigQuery | PostgreSQL
- Architected scalable analytics platform integrating **100+ data source**.
- Optimized ETL pipelines using BigQuery for **real-time dashboards**.
- Built **REST APIs** for customizable reporting and data visualization

EvaluaSys Al
— AI Evaluation Portal
React | Flask | MongoDB | Al Model Integration | Al Implementation | Speech-to-Text | Text-to-Speech | NLP
- Developed AI-driven evaluation platform automating pro ject assessment
- Implemented NLP and voice systems for real-time student interaction
- Built intelligent workflows for quizzes, plagiarism detection, and validation

unHinged
— 2D Psychological Survival Game
Godot Engine | C# | AI Systems | Procedural Generation | Object Pooling | Physics Engine | Audio Systems
- Developed psychological 2D survival game with dynamic gameplay systems.
- Engineered “Fear Meter" affecting visuals, audio, and mechanics in real time.
- Achieved stable **60 FPS** using object pooling and optimized systems

Avenix
— AI Analytics Platform
React | TypeScript | Express.js | Node.js | Python | PostgreSQL | LangChain | Vector Stores | Embeddings | AI/ML | REST APIS
- Built enterprise AI platform with LLM-based agents and contextual memory.
- Designed real-time architecture using WebSockets & Redis (sub-second latency, **+40% query performance**).
- Developed scalable backend APIs and data pipelines for analytics & automation.

Addictive Ads
— AI-Powered Ad & Receipt Management Platforms
Django, Next.js, MongoDB, LLM Prompt Engineering
- Developed scalable ad management platform with real-time campaign analytics and AI-powered receipt system for automated data extraction.
- Automated workflows using LLM-based prompt engineering to enable high-accuracy structured parsing of financial data.
